

CARBON SEQUESTRATION IN SOUTHEAST ASIAN CITIES: WHERE ARE WE HEADED?

Based on possible future scenarios, we can expect huge drops in carbon sequestration. Only intensive reforestation leads to more carbon sequestered!

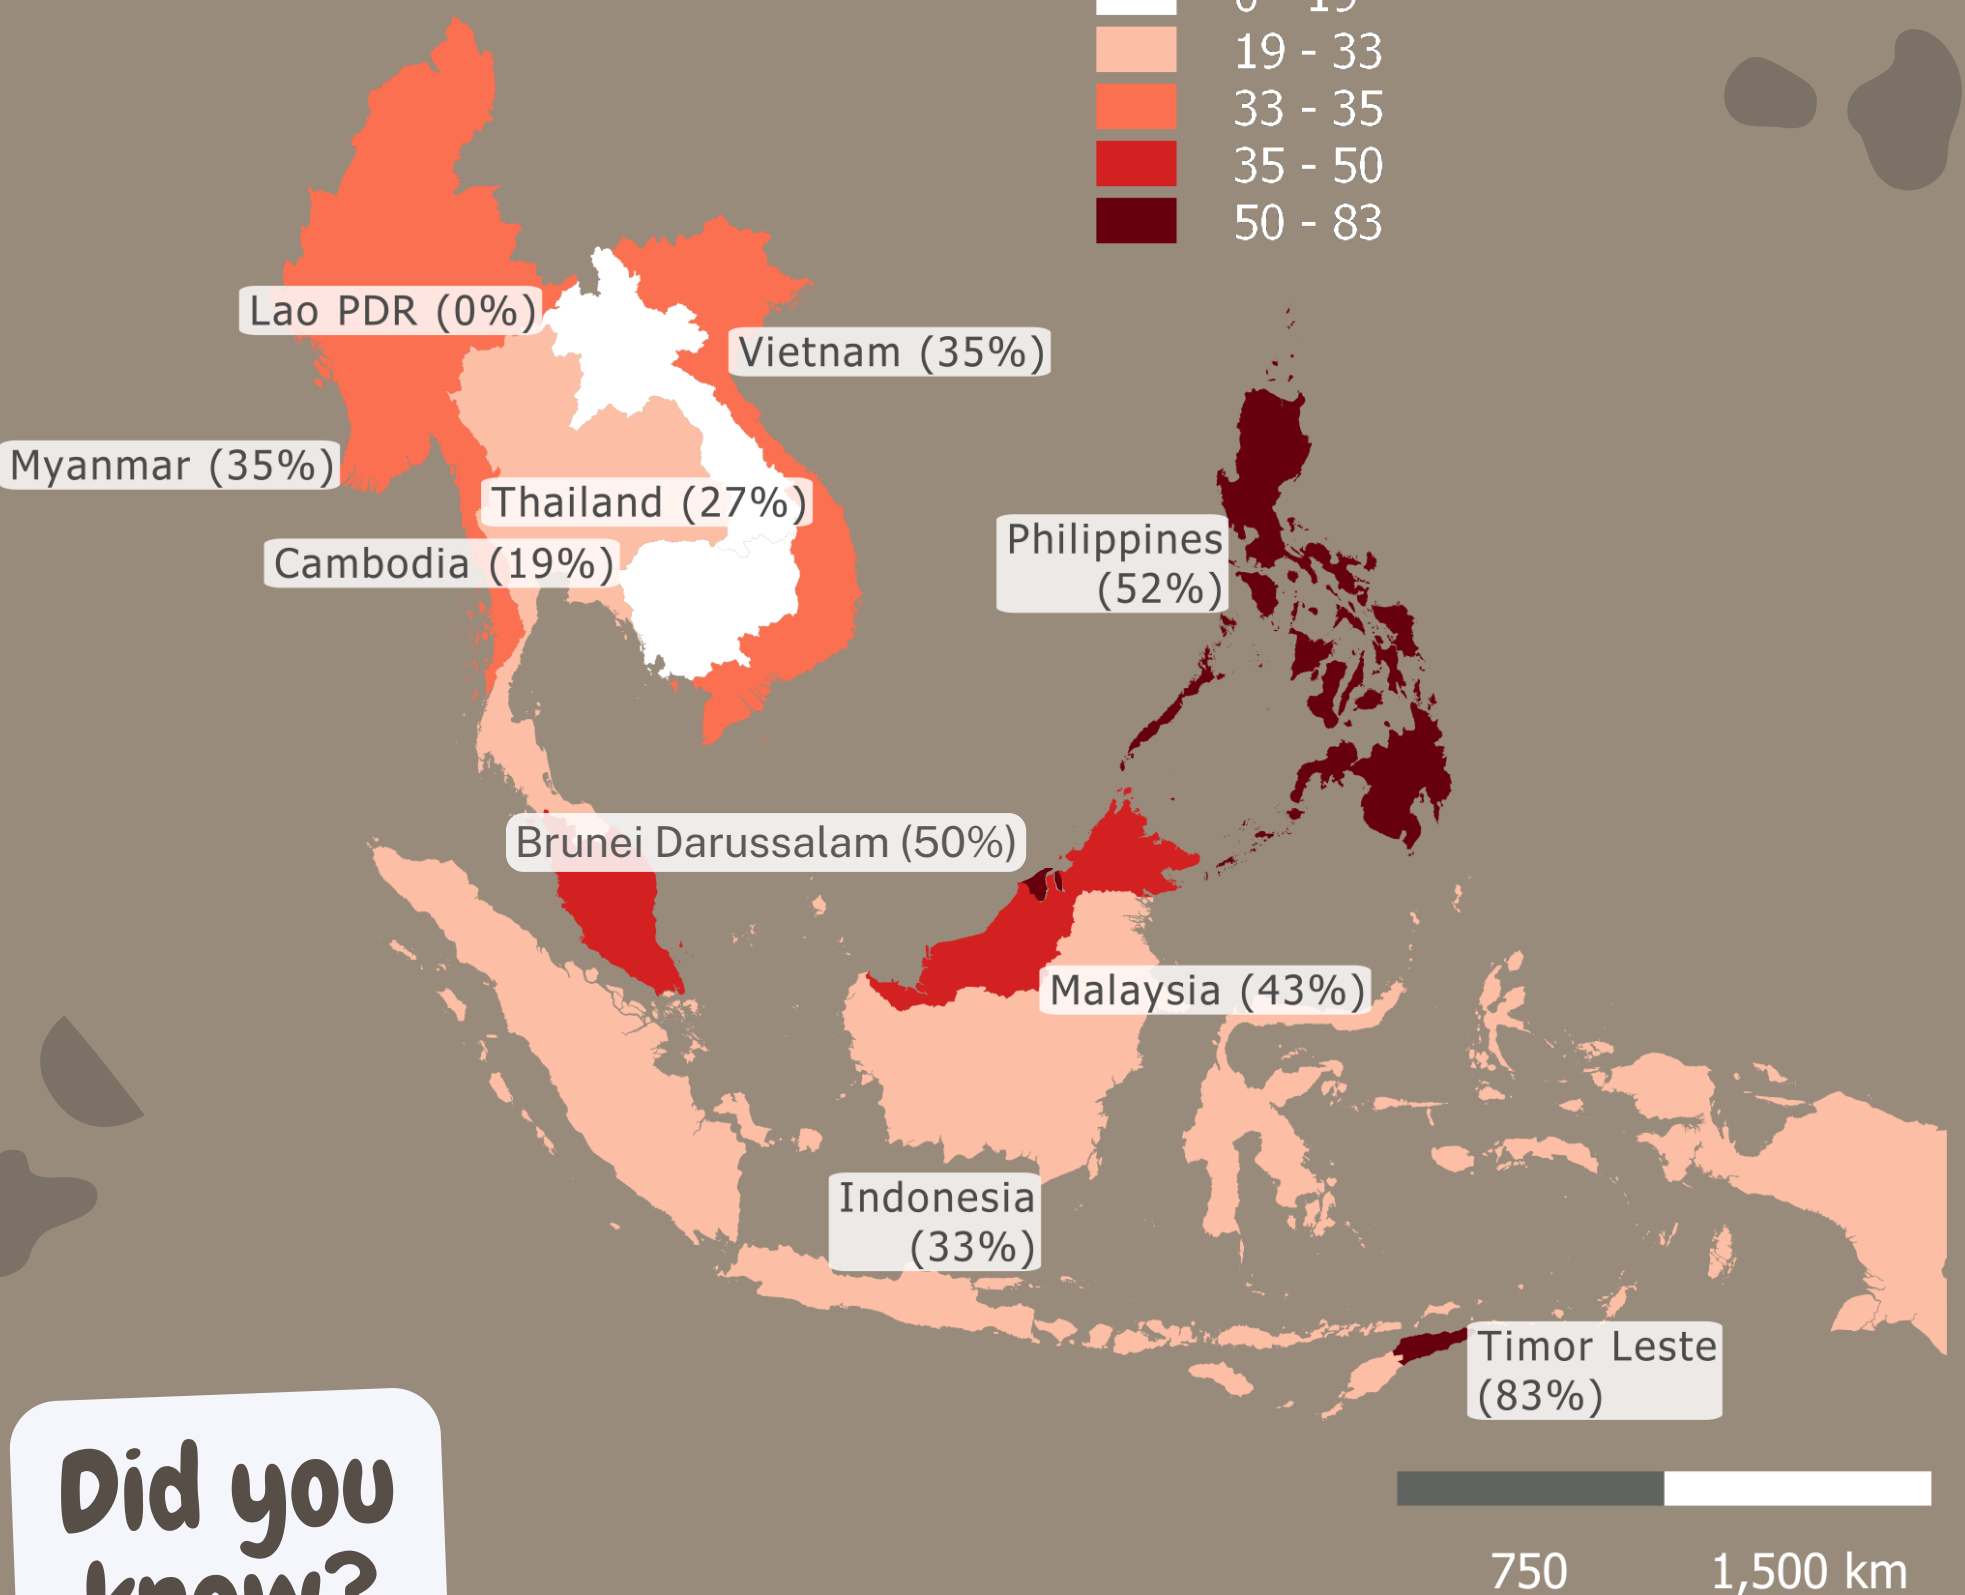

*Scenarios are based on projections from IPCC-SSP

But urban clusters are unequally affected. For some countries, majority of urban clusters are expected to lose carbon, irrespective of the future scenarios.

% of urban clusters - carbon always lost

- 0 - 19
- 19 - 33
- 33 - 35
- 35 - 50
- 50 - 83

Did you know?

More action is needed. Even with the reforestation scenario, majority of cities will only compensate 1% of their carbon emissions with carbon sequestration.
